Re: Leadership in Energy and Environmental Design (LEED v4)
Recycled Scrap
ISO 14001

To Whom It May Concern:

The U.S. Green Building Council has developed the LEED program rating system to define and measure "green buildings". Our Chicago Corporate Office is a LEED certified building.

One component of the LEED rating system is Recycled Content of Materials and Resources. ArcelorMittal is the largest recycler of scrap steel in the world. Every year more than 25 million tons of our products are recovered and recycled, which saves around 36 million tons of CO₂.

Most ArcelorMittal USA flat roll facilities manufacture steel that was produced using the BOF (Basic Oxygen Furnace) process. These facilities include Burns Harbor, Calvert, Cleveland, Gary, Indiana Harbor East and West, and Riverdale. These BOF operations consume approximately 24.0% recycled scrap, of which 17.0% is pre-consumer and 7.0% is post-consumer scrap.

Our Coatesville, PA facility uses the EAF (Electric Arc Furnace) process. EAF operations consume approximately 97.9% recycled scrap with 47.9% post-consumer scrap and 50.0% pre-consumer/post-industrial scrap.

Extracted material - Iron from iron ore is approximately 90% of total content at BOF facilities. The table below displays the major iron ore sources and distributions as a percentage of the steel plants' totals.

ArcelorMittal actively pursues environmental stewardship throughout our organization. By way of our environmental policy, we focus on responsible management of our assets in a way that minimizes environmental impact. The ArcelorMittal USA Environmental Policy addresses several environmental objectives including compliance with regulations, minimizing our CO₂ footprint, preventing pollution, efficient use of natural resources, energy and land, and employee and supplier awareness. Our steel making facilities' environmental management systems are certified to ISO 14001.

Should you have an interest in discussing this information further, please feel free to contact me as follows.
