The Hannah chair line are molded using 25% glass filled polypropylene (GFPP). The BOLA, SMILE, and ARC chair lines are molded using prime polypropylene (PP). The BOLA end cap and tubes along with the BOLA formal glides are molded using glass filled nylon (GFN).

All the above products could have a blend of post-industrial recycle GFPP, PP, or GFN. The blends for each resin family could be as high as 25%, depending on the color being molded in each part.

All the resins above can be recycled 100%.

The packaging used on all products above are shipped on 100% recyclable wooden skids, cartons, and shrink wrap.

Let me know if you have questions or need more information.

Thank you,

Bobbi Leslie
